

## New Features in version 2020

---

### Requirement

InterForm400 version 2020 requires OS/400 **V6R1** or higher

---

### Modules

A new hardware independent solution for adding **written signatures** has been added to the signpad module . With this you can sign a PDF file generated by InterForm400 via a **browser**, so now you can even sign a PDF file via mobile phone or tablet.

Support for **color images in InterWord400** has been added.

---

### Design(er)

The graphical designer now installs on **any newer java version** (java 7 or higher), but still only up to Java 8 has been fully tested.

A new **multi-line text block** design element has been added. With this you can add several lines of fixed text in a single design element, and let InterForm400 handle line breaks, dynamically change fonts, colors etc. and create fully justified text blocks. Useful for fixed text on back page overlays.

The **G=GL/2** design element is no longer supported.

A **cut option** for the **remap window** element has been added for PCL/PDF output. With this you can choose to remap as much text, that fits within a specific width.

The designer **result view** has been **improved** with better result view. The **performance** of the designer has also been improved.

Now **color TIF images** can also be installed as **black/white images** in InterForm400 for both PCL/PDF and for label print . Previously only sharp/black white (1 bit level) was supported.

Support for the **Vietnamese codepages** 1130 (non-Euro) and 11164 (Euro) has been added for the graphical designer.

---

## Email

A new command, **APF3812/MAILREPSND (Daily statistics** for SMTP sender) has been added for **email administrators** to get an **report** as email, which displays the number of sent emails and the status. In this way the administrator can quickly verify, if any emails could not be sent without the need to look in the email log.

Up to **7 extra attachment** (apart from the normal merged PDF) can now be added to an email sent with the **email finish definitions** (not supported for exit programs).

---

## Other

The length of supported **SQL expressions** in split definitions has been **extended** from 1 to 4 lines.

The **AFC error monitor** has been **updated** to give you more flexibility. You can e.g. now set a polling interval and set a common email address to send to for all Auto Forms Control jobs.
