

New Features in version 2020

Requirement

Required version of **Java Runtime Environment** is **1.7** or **1.8**.

For the **IBM i** platform OS400 **V7R1** or higher is required, as earlier OS400 versions does not support Java 1.7.

AdvancedPDF

It is now possible to create **PDF form** files with input fields. This requires a license, that includes the **AdvancedPDF** module.

Modules

The **SpoolToXML400** module (for converting spooled files into XML on the IBM i platform) has been extended with a new **fragment option (3=Tree structure)**, which makes it possible to create smaller and more structured XML files for easier design and improved performance.

An **export/import** option for the **SpoolToXML400** module has been added.

Design(er)

Support for special **QR barcodes** for the **Swiss payment standard** is included.

An option to generally **replace non-breakable spaces (NBSP – hex A0)** with a normal space is included. This special character is seldom used in amounts to separate thousands from the lower part of the number.

Other

A **web interface** has been added to the **remote print client**.

The SpoolToXML400 manual is now included in the InterFormNG manual.
